Fixing GitHub Access Token Issue (08/13)

- Follow steps 1-6 on this helpful article to create your personal access token. If it asks you for an experation date, put never even though it tells you that's a bad idea.
  - **After step 6 above, you need to remove my remote repo as well so type** `git remote remove upstream`
- Now go back to that link and finish the remaining steps starting with 7.
- After you follow all of those steps, you will be able to sync with your own repoistory, but not mine. To sync with mine, try: `git remote add upstream  https://github.com/bennoble/python_summer2021.git`
- Now everything should work as normal.
